

UIDAI Data Hackathon 2026

Aadhaar Enrollment & Update Analysis

Generated on 11 January 2026

1. Problem Statement

This project analyzes anonymized Aadhaar enrollment, demographic update, and biometric update datasets published by UIDAI. The objective is to identify patterns, detect anomalies, and apply machine learning for forecasting enrollment trends.

2. Dataset Overview

Enrollment records: 319,696

Demographic update records: 676,336

Biometric update records: 871,940

States covered: 49

Districts covered: 939

3. Key Insights

- Total enrollments analyzed: 2,622,196
- States covered: 49
- ML forecast MAE: 177.25
- ML anomalies detected: 12

4. Exploratory Visual Analysis

Age Group Distribution

5. Machine Learning Analysis

Forecast MAE: 177.25

States covered in model: 46

ML anomalies detected: 12

6. Conclusion

The project demonstrates how large-scale administrative datasets can be processed into meaningful insights using structured pipelines, statistical analysis, and machine learning.
